

Respiration here again
Aerobic uses oxygen

Split glucose to start the show
Watch for ATP to grow

2 go in and 4 come out
2 net ATP per bout

The CAC goes round and round
2 more ATP are found

Bonds will break oh what to do?
Carbon leaves as CO₂

Load the released energy
Take it to the ETC

Dump trucks dump their energy
Watch electrons play slinky

Look who comes to stop their fall
Oxygen will catch them all

Water forms and goes away
Protons join the par-a-tay

Hydrogens have joined the crowd
Boy it sure is getting loud

Hydrogens run to the door
Down the tunnel more and more

As they leave the door will spin
ATP will form again

2 and 2 and 34
Is 38 let's make some more
